StockFlow AI

AI-powered invoice discrepancy workflow automation

Team: Jet2Holiday
Members: Hiew Yi Hwa

Problem

- Invoice issues are handled manually across chat, email, and spreadsheets.
- Staff retype the same information multiple times.
- Routing decisions are inconsistent (operations vs finance vs manager).
- Missing details and duplicate cases delay resolution.
- Audit trail is weak and hard to track.

Next Slide

WHY IT MATTERS

- Delays in resolving supplier issues affect operations and cash flow.
- Wrong routing increases workload and response time.
- Incomplete cases cause back-and-forth communication.
- Teams need speed, consistency, and traceability.

Why It Matters

OUR SOLUTION

Our Solution

- One-time intake through:
 - Smart Text Intake
 - Structured Form Intake
- AI converts input into a structured case.
- System recommends urgency and next action.
- Case is tracked end-to-end with timeline events.

CORE FEATURES

Core Features

- Issue classification from user input.
- Urgency prediction for prioritization.
- Next-action recommendation for routing.
- Missing-field detection + clarification loop.
- Duplicate case detection before case creation.
- Case timeline/events for auditability.

TECHNICAL ARCHITECTURE

Technical Architecture

Frontend: **Streamlit**

Backend: **FastAPI + Uvicorn**

database: **SQLite**

AI Layer: **GLM (ilmu-glm-5.1)** + deterministic
fallback

Development Tool: **Python**

ROADMAP

Roadmap

- Next: ERP integration, role-based access, analytics dashboard
- Expand from prototype to production deployment

**Thank you for
listening**
